The super-rigid design of SNI's Heavy-Duty Lift-up Dresser provides for superior dressing quality of both conventional-abrasive and super-abrasive grinding wheels.

As the dresser is designed to accept virtually any type of dressing tool, SNI can, after thorough review of your application, apply the most appropriate diamond tools:

- Single Point Nibs.
- Rotary-Periphery Disks.
- Cup-style Wheels.
- Form Rolls.

For application of rotary-type disks, cups, and rolls, the spindles can be driven hydraulically, with an electric motor, or with a servo drive.

Consult SNI for more information, or review of your application.
