

PRODUCT ROUNDUP

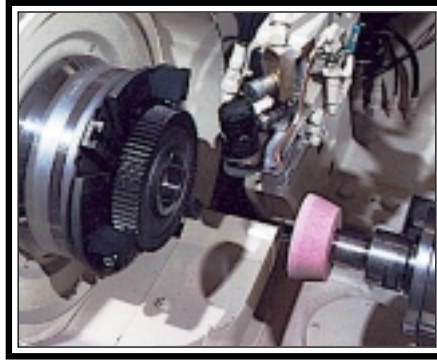

Better Solutions For Today's Grinding Challenges

New Machines

SNI's capabilities are best exemplified by its proprietary-products, our SN-series of machines offer chucking, shoe centerless, roll centerless, and rotary surface tooling packages. These are modern, productive internal/multi-surface and external grinding machines, capable of producing the highest quality product. Various arrangements and capacities (up to 24" (610 mm) diameter) are available.

Upon thorough review of your specific application and/or grinder requirements, we take an engineered approach offering to supply all equipment, as well as developing the grinding process, suitable for the application. The latest in control technology is integrated with SNI's own internal-grinding-specific software, which when combined with superior mechanical features, provide the complete grinding system necessary to meet today's evolving manufacturing challenges.

Remanufacturing and Redesign of Heald Grinders

Our remanufacturing business is unique in that, unlike conventional machine tool rebuilders, we specialize in grinders originally manufactured by the Heald Machine Division of Cincinnati Milacron. This ranges from the high-production type to the toolroom models. No other company in the world can profess the level of Heald Machine expertise and product knowledge, as we have over 1,000 total man-years of Heald experience.

Service and Parts

SNI's service and parts business goes to the roots of the organization, as the original concept of Service Network was to offer the experience and skills necessary to support existing Heald products. Today, even more so than ever, the world turns to SNI to quickly, and correctly diagnose and address their Heald grinder needs. Beyond our industry leading knowledge, SNI's resources include a substantial inventory of new and used Heald replacement parts. In addition, we offer a wide array of SNI-designed replacement parts and assemblies, which provide increased reliability and flexibility over original OEM designs.

Our expertise, service, and parts availabilities cover all Heald grinders, including CF's, EF's, 171/272's, 78's, 273A's Cinternals, and Rotaries.

Contact us today to review your particular application or service requirement.

SNI offers years of experience as designers and manufacturers of modern, productive and precise Internal and External Grinding Machines

MANUFACTURING FACILITIES

Our facility is located in Worcester, Massachusetts, allowing us to take advantage of the region's vast grinding machine history. Engineering, purchasing, production, and quality control groups combine to assure state-of-the-art technology, quality workmanship, and reliable performance.

APPLICATION CAPABILITIES

A team of experienced Applications Engineers brings the knowledge gained in a wide variety of successful installation to bear on your particular needs and constraints. Technically skilled and creative, our custom engineering capabilities distinguish SNI from any other company in the field.

PARTS AND SERVICE

SNI supports its industry-leading product knowledge by maintaining a comprehensive parts inventory to minimize downtime. Installations, field service, operator training, and maintenance recommendations are handled professionally by our technically skilled Service Engineers.
